Technical Skills

Languages: Javascript, Typescript, C++, Go, Python, Java, C, SQL

Developer Tools: AWS, Docker, Git, Superset, Retool, n8n, LLM, GenAI, PostgreSQL, Redis

Technologies/Frameworks: Nodejs, NestJs, Reactjs, Nextjs, SpringBoot, .Net, LangChain, Jupyter Notebook

AI/ML: LLMs, Generative AI, OpenAI API

Experience

Medibuddy

Jan 2024 – Present

SDE 1 Bengaluru, Karnataka

- Designed and built Track Order pages for web and mobile-web with native integrations (downloads/uploads, back navigation, in-app redirection), supporting **15K+ monthly clicks** and reducing support queries by **30%**.
- Implemented dynamic confirmation letter generation using **HTML rendering and AWS S3**, serving **3K+ secure downloads/month** with authorized access controls.
- Improved in-clinic consultation search using **OpenSearch** with keyword search, filters, range filters, and slot cutoff logic, increasing successful searches by **95%** and reducing stale results by **99%** via **SQS-based real-time updates**.
- Built Doctor Catalogue Management for Provider Central to manage slots, holidays, and availability across **3K+ clinics/providers**; introduced **QC workflows and audit logs**, reducing catalogue errors by **80%**.
- Designed and implemented **RBAC with Admin, Editor, Viewer roles** across branches and specializations, improving access security and reducing authorization misconfigurations by **85%**.
- Designed a scalable **OTP-based attendance service** with **100% accuracy**, handling **100+ verifications/day**; extended OTP flows across **Track Order and confirmation letters** for reuse across **3+ teams**.
- Built walk-in appointment booking flow enabling instant in-clinic consults without slot dependency, increasing on-site bookings by **10%**; implemented **real-time confirmation** using **AWS Lambda and EventBridge Scheduler**.
- Designed and built a wallet payment reconciler handling **2K+ peak daily transactions** to refund/unblock wallets for failed or timed-out payments, ensuring **99.9%+ availability** using **SQS async processing with DLQs**.

Projects

Event Management System | Backend Development

- Designed and built **5 NestJS microservices** using **API-based inter-service communication**, containerized with **Docker** and orchestrated via **Kubernetes (Minikube)**, with **PostgreSQL and Redis** for persistence and caching and **Prometheus-Grafana** monitoring. Ensured **data consistency** using the **Saga pattern**, **DB-level locks**, and **UUID-based idempotency keys** to prevent race conditions and double booking.

LLM-Based Stock Analysis Platform

- Designed an **end-to-end LLM-powered analysis pipeline** for financial reports and **multi-quarter concall comparison**, enabling automated qualitative and quantitative stock analysis. Built a **cost-aware, event-driven backend** using **AWS S3, SQS, and Aurora PostgreSQL** to process, store, and query structured LLM outputs at scale. Implemented **hybrid RAG (Retrieval-Augmented Generation)** by combining **SQL-based retrieval of structured financial insights** with **vectorized concall transcripts**, reducing manual fundamental analysis effort by **80%**.

Publications/Certifications

Publication

Feb 2025

Rail Guard: Intelligent Rail Inspection using YOLO-3

ICEFEET 2025

- Showcased an automated deep-learning-based rail fault detection system: using YOLOv3 and image classification models.

Certificates

Mar 2025

AWS Certified Developer Associate 2025 DVA-COZ

- Proficient with ECS, EC2, S3, Lambda, IAM, SQS, Load Balancers, and other AWS developer tools.

Education

Ramaiah Institue of Technology

Dec 2020 – Jun 2024

Bachelor of Engineering CGPA - 8.1

Bengaluru, Karnataka
